

# Remote Email Filtering Services

## THE NEXT STEP IN IT

Protecting your email is a constant battle. At the Harding Group we can help.

Our solution combines cutting-edge, multi-layered, anti-spam technology with state of the art virus protection to ensure your email system is able to meet the demands of your business.

Our offsite location relieves your network from the constant thrashing of SPAM senders, and only passes valid email to your environment.

Messaging is the lifeblood of doing business today. Security threats and stringent compliance regulations for electronic records transfer make it imperative that companies deploy a comprehensive Email Risk Management strategy to protect their email infrastructures.

Our Remote Email Filtering Services include:

**Policy-Based Management** - An intuitive, directory-services enabled policy engine that facilitates the granular deployment of customized policies that address regulatory compliance, corporate governance, and security issues at a domain, group, or user level.

**Intelligent Multi-Layered Approach to Security** - Remote Email Filtering Services or Email Protection Services (EPS) are designed to provide an integrated and automated approach to messaging security and ensure uninterrupted email continuity and security. Your email system is defended against directory harvest and denial of service attacks at the perimeter. Intelligently layered engines analyze email messages without the complexity of tedious filter management or user administration, for complete spam and virus protection. EPS inspects incoming and/or outgoing email messages and automatically eliminates spam, viruses, and unwanted content from your email environment.

**Revolutionary Spam Detection** - Our Remote Email Filtering Services utilize multi-tiered, auto-updated engines that inspect the full range of attributes of incoming email messages, including sender IP addresses, message envelope headers and structure, as well as the unstructured content in the body of messages. It tests numerous connection-level data points, including DNS and MX record verification, to deliver unrivalled accuracy with virtually no false positives.

**Aggressive Virus Elimination** - EPS include a dedicated automatically updated virus engine. In addition, our Remote Email Filtering Services feature pro-active real-time threat analysis to detect and mitigate virus outbreaks faster than traditional signature-based solutions.
